*Mathematical Puzzle Programs*

## **Part I**

# **Game Overview**

## MaPP Challenge '18 - Gotta Solve 'Em All Story

Welcome to the world of **Mobile Monsters**, or **Mobímon** for short! Not to be confused with the similarly named video game series loved by fans the world over, Mobímon is a *completely original* concept where Trainers befriend monsters and use them to battle opponents. (Cough.)

Under the guidance of your mentor, **Dr. Treename**, you will soon set off on your adventure to befriend the Mobímon of the **Kantor region**. You'll meet many strange characters, but if you can solve their problems they just might lead you to the location of the **Dojo Masters**. By earning their respect, you'll be allowed to enter the **Mobímon Tournament** for the chance to be crowned **Mobímon Champion**! Maybe you'll even discover the location of the Legendary Mobímon  $\mu$ Too?...

As you might expect, most of the challenges you'll face today won't actually be combat related. In the world of Mobímon, nothing is more important than your **problem-solving abilities**. So sharpen your minds and pencils, because you never know when a wild **puzzle** will appear!

# MaPP Challenge '18 - Gotta Solve 'Em All

## Rules

### Leagues

Each team is registered in either the Competitive or Recreational League. If both Leagues are playing simultaneously today at your campus, then all scoring and awards are handled separately in both Leagues.

### Schedule

The game officially begins at \_\_\_\_\_ and ends four hours later at \_\_\_\_\_. All solutions are due at Game Control by the end of the game; late submissions will not be considered.

### Opening Puzzle

The game begins with an Opening Puzzle to warm things up. Solving this puzzle quickly will earn your team **5 Victory Points** and immediately move on to the rest of the puzzles! Don't worry about getting stuck, as all remaining teams will be allowed to move on at \_\_\_\_\_. However, you cannot earn Victory Points for this puzzle after that time.

### Main Puzzles

After solving the Opening Puzzle, you will receive four Main Puzzles. While you'll be given explicit instructions on how to reveal the word or phrase that solves each Main Puzzle, you'll have to rely on your mathematical modeling and problem-solving abilities to actually make it happen. Report your solution to Game Control before the end of the game, and your team will earn **15 Victory Points each**, for a maximum total of **60 Victory Points**.

### Bonus Puzzle

Along with the four Main Puzzles you will be given a Bonus Puzzle. This optimization puzzle doesn't have a unique solution, but you should still attempt to submit the best solution you can to Game Control before the game ends. That's because if your team is tied in Victory Points with another team, your scores on the Bonus Puzzle will be used to **break the tie**. You may submit up to three solutions throughout the game (including any invalid submissions), and your best solution of the three will be considered.

### Cryptic Puzzles

You will be given the opportunity to solve an additional Cryptic Puzzle for every Main Puzzle you solve. These puzzles aren't as straight-forward as to their solution techniques, but your team might be able to use your critical thinking to extract a hidden word or phrase. Submitting this solution to Game Control will earn your team **5 Victory Points each**, for a maximum total of **20 Victory Points**. Teams stuck on a Main Puzzle will get their shot eventually: all Cryptic Puzzles will become available to all teams at \_\_\_\_\_, one hour before the game ends.

### Metapuzzle

If your team is clever enough to solve all four Cryptic Puzzles, a final Metapuzzle will become available. A correct solution submitted to Game Control is worth **10 Victory Points**. This puzzle will become available to all teams at \_\_\_\_\_, one hour before the game ends.

## Another Puzzle?

Shrewd players may discover how to earn an additional **5 Victory Points** for their team...

## Hints

Recreational teams may ask for hints at Game Control at any time during the game, for any Main Puzzle, Cryptic Puzzle, or Metapuzzle. Competitive teams may only receive help on the Main Puzzles. They may ask for clarifications on the Main Puzzles throughout the game, but may only ask for direct hints during the final hour of the game, starting at \_\_\_\_\_. Players seeking hints should be prepared to explain all work done on the puzzle so far, or the hint they receive may not be useful.

## Game Control

Only one team is allowed at a time inside Game Control. If multiple teams wish to speak to Game Control, they must form a line outside the room and will be seen first-come, first-served. Teams that have multiple reasons to speak to Game Control must return to the line for each reason.

## Winning the Game

The team that earns the **most Victory Points out of 100** by the end of the game is the **winner**. If any teams are tied, their Bonus Puzzle scores will be used to break the tie. If that's not enough, then the tie will be broken based on how quickly those teams earned their Victory Points (the time each team submitted its last correct puzzle solution).

## Additional Rules/Advice

- Players should not do anything which would interfere with other teams solving puzzles. Be a good sport!
- Submissions for each puzzle, besides the Bonus Puzzle, are unlimited. Every submission for the Bonus Puzzle will be carefully graded by Game Control, so only three submissions are allowed.
- Before visiting Game Control to ask for a hint or clarification, make sure you've read all the material accompanying the puzzle!
- Teachers and chaperones are not allowed to help Competitive teams solve puzzles.
- Teams may use any resources they have brought (phones, computers, etc.) to solve puzzles, but Competitive Teams may not receive any direct assistance from outside their team (e.g. you can't Phone a Friend).
- Players must remain within any physical boundaries set by both Game Control and their teacher/chaperone at all times. Players may not explore campus (if/when allowed) without a buddy.
- Teachers/chaperones are responsible for their students at all times.
- Since this game will be played at different campuses on different days, please do not spoil any of today's puzzles or solutions online until the game book is released publicly on MaPPmath.org!
- Contact Game Control immediately in the case of emergency or any issues with these rules.

## Campus Guidelines

Here are some guidelines for local campuses on how to prepare for and run the event.

### Schedule Template

- 0:00 - Registration
- 0:45 - Orientation
- 1:00 - Game Begins with Opening Puzzle
- 2:00 - Opening Puzzle due
- 4:00 - Cryptic/Meta Puzzles released
- 5:00 - Game Ends (all solutions due)
- 5:30 - Wrap-Up and Awards
- 6:00 - Dismissal

### Classroom Space

A large **lecture hall** is recommended for running Registration, Orientation, and the Wrap-Up. Game Control can be stationed there during the game as well.

Each team should be given a separate **classroom** so that they may openly collaborate with teammates without spoiling puzzles for other teams. It is useful to affix **printed signs** on each classroom and Game Control to help players navigate your space, as well as any additional signage required to get around. **Blank templates with the MaPP logo** are available in the Appendix.

### Team Supplies

**Scissors and tape** should be provided in each classroom. In addition, **chalk or whiteboard markers** should be provided if teams will have access to chalkboards or whiteboards in their room. We recommend **inviting teams to bring additional supplies**, such as graph paper, colored pencils, and simple calculators.

Note that teams may also choose to bring smartphones, laptops, cameras, and so on. Due to the wide availability of such technology (particularly phones), we discourage campuses from banning outside equipment, but also do not suggest to explicitly recommend such items as they aren't required to enjoy or be competitive in this game. The puzzles are designed so that they cannot be solved using Google or brute force methods, with one exception. Savvy programmers might be able to write code to help optimize their team's Bonus Puzzle solutions, which is why the Bonus Puzzle is only used to break ties.

## Copies

All puzzles are designed to be printed/copied in **grayscale**, both for the convenience of campuses and for accessibility by players. See below to account for how many copies are needed throughout the game. It is recommended to print copies for at least **two more teams than you expect to participate** as extras, depending on your access to last-minute copying.

**Each volunteer** working at **Game Control** should have a **complete copy of the game book in a binder** for their reference.

## Registration

**Each player** should receive a **packet** containing the **Story**, **Rules**, and **Code Sheet** pages of the game book. They should also receive a **pencil** and **notepad** for use during the Opening Puzzle and the rest of the game.

Some campuses also choose to distribute other giveaways/swag/brochures at registration. Many bookstores are willing to provide branded disposable bags to help distribute materials.

Teams should be directed to their assigned classroom where they can drop off everything except the provided packet, pencil, and notepad. They should then return to Game Control's lecture hall to await Orientation.

## Orientation

The Story and Rules should be reviewed, and any questions from players should be answered. In particular, boundaries for where players are allowed to travel during the game should be established.

## Opening Puzzle

**Each team** should receive **four copies** of the **Opening Puzzle** and supporting documents. The deadline for completing the Opening Puzzle should be clearly communicated.

If you wish for players to **explore your campus**, then you should also provide a **Campus Map** with twenty locations labeled 1-20. The Opening Puzzle solves to four of those numbers, so players should be instructed to visit those four locations. For larger destinations, you should specify where to visit (e.g. the front door). You may choose to either place a **volunteer** at each location to distribute a token to each team that successfully finds it, or an **envelope** of tokens for teams to claim at each location. You may choose to have teams pick up a copy of one of the four **Main Puzzles** at each location to serve as this token, but these should not be the only copies of the Main Puzzles given to each team (see below).

Once this puzzle has been reviewed for all players, you may dismiss the players to begin solving. Once each team completes the puzzle, they should present their solution and/or tokens to Game Control. In return they should receive an **envelope** containing **four copies each of Main Puzzles 1-4** and the **Bonus Puzzle**, including supporting documents. They should also receive a **Scoresheet** to mirror the **Scoresheet copy** maintained at Game Control, updated with the results of the Opening Puzzle.

At the deadline for the puzzle, all remaining teams should return to Game Control to pick up their puzzle envelope and scoresheet, and move on to the Main/Bonus Puzzles. If additional volunteers have been organized to facilitate the exploration of campus, you may choose to dismiss them at this time.

## Post-Opening Gameplay

After the Opening Puzzle, teams can remain in their provided classroom for the duration of the competition, except to submit solutions to Game Control.

A volunteer should stand at the door of Game Control to ensure at most one team is allowed in Game Control at all times. Solutions to the Main Puzzles, Cryptic Puzzles, and the Metapuzzle are all short words/phrases and may be communicated to Game Control verbally, but may be written out on paper if clarification is required. The solution to the Hidden Puzzle is also a short word/phrase and may be communicated verbally or written out, but Game Control should only confirm the existence of the Hidden Puzzle explicitly after receiving a correct solution. Players should be asked which puzzle they are attempting to solve before giving a solution.

As each Main Puzzle is solved, that team should receive a **packet** containing **four copies** of the corresponding **Cryptic Puzzle**, including supporting documents. Once each team has solved all four Cryptic Puzzles, they should receive a **packet** containing **four copies** of the **Metapuzzle**, including supporting documents. All teams are allowed to pick up an **envelope** containing all unclaimed copies of the Cryptic Puzzles and Metapuzzle during the final hour of the game.

Each time a puzzle is correctly solved, it should be updated by Game Control on both their copy and the team's copy of the Scoresheet, including a timestamp.

Recreational teams are allowed to ask for hints at Game Control at any time for any Main Puzzle, Cryptic Puzzle, or Metapuzzle. Game Control should ask players to explain the work they've done thus far, and give a single hint that should help the team make some amount of progress. Different teams may receive different hints for the same puzzle depending on their progress.

Competitive teams may ask for clarification on the Main Puzzles throughout the game, but not receive direct hints at first. That is, your advice should help clarify the mathematical concepts involved, not directly assist players with the specific problems posed. Competitive teams may receive direct hints for the Main Puzzles during the final hour of the game. Game Control should provide as much help as is necessary at this time; the goal of the Main Puzzles is to expose players to new types of mathematics, so most teams should solve most of the Main Puzzles by the end of the game. This way most teams experience success by earning at least 60 points, while team rankings are still differentiated by the other puzzles.

Recreational and Competitive teams cannot be given any hints for the Bonus Puzzle or Hidden Puzzle.

Each team is allowed three submissions of the Bonus Puzzle. Generally this puzzle should be judged by Game Control in front of the players to confirm the validity of the submission. Each submission is recorded on both Scoresheets, including crossing out a box for an invalid submission. Only the best submission from each team is used. If the game has ended with multiple teams in line for Game Control, all submissions for all teams should be collected as quickly as possible and graded. Teams may not submit multiple Bonus Puzzle solutions after the game has ended.

## Food

Campuses that will be running the event through lunchtime are encouraged to provide a **pizza lunch** for players. This lunch should not interrupt the game; rather, players should be able to grab a bite to eat to have while they continue to solve puzzles. In addition, **snacks** (fruit, granola bars, etc.) and **drinks** (bottled water) are nice for players to have access to during the game. Don't forget to provide appropriate **plates, cutlery, napkins, and trashbags**.

This food can be distributed at a **central location near Game Control** (but not inside Game Control's room).

## Wrap-Up and Awards

At the end of the game, teams should straighten up their classrooms before returning to Game Control for the Wrap-Up. **Trash bags** may be provided for this purpose.

Teams should line up outside Game Control until results have been tabulated. Once all results have been determined, teams may be seated inside Game Control. **Solutions** to all puzzles should be projected and reviewed with all players.

Awards for Recreational/Competitive teams are treated completely separately if both Leagues are present. **Certificates** should be distributed in random order to all teams placing below 3rd place. A **3rd Place Certificate/Trophy** is then awarded. After reminding the 1st place team to be respectful, a **2nd Place Certificate/Trophy** is then awarded, followed by the **1st Place Certificate/Trophy**. Opportunities for photographs should be allowed during this process and after dismissal.

After awards are done, teams may be dismissed.

## Shirts/Theming

Campuses may choose to provide/sell **shirts** to volunteers and players, keeping in mind that volunteers should be identifiable to players by sight. To this end, we encourage distributing shirts at Wrap-Up, or using different colors for players/volunteers.

Optionally, you may encourage teams and/or volunteers to wear school colors/shirts, or to develop a team name/theme fitting the game's theme.

## Social Media

Players/teachers/volunteers should be encouraged to tag @MaPPmath and #Challenge18 on Twitter with non-spoiler posts/media during and after the event.

## ClueKeeper

The **ClueKeeper** app will be piloted at select campuses for this event. All rule changes relevant to the usage of ClueKeeper's solution submissions and GPS enforcement should be made clear to players via the app. Each team must have access to an iOS or Android **smart device** with the game downloaded to participate, which may be provided by your campus or the participating teams. ClueKeeper may be downloaded from [cluekeeper.com](http://cluekeeper.com). A helpful **ClueKeeper FAQ** is available in the appendix to support your players.

## **Part II**

# **Opening Puzzle**

## MaPP Challenge '18 - Gotta Solve 'Em All

# The Kantor Region

## Opening Puzzle

The Mobímon Expert, Dr. Treename, has gifted you with your very first Mobímon and sent you on a journey across the **Kantor Region** to discover new Mobímon and battle other trainers! Kind of odd for a grown man to be sending other people's kids off on adventures before they've even graduated high school, but hey, at least he gave you a **Road Map**!

While visiting all twenty numbered locations would be great, you're a busy person! Upon the advice of Dr. Treename, you can **skip out on visiting sixteen of them** described by the following clues.

In these clues, a **neighbor** is a location that can be directly accessed along a road without visiting another location first, and the **cardinal directions** north (N), south (S), east (E), and west (W) ignore roads unless specified.

- Flying SE would cross road connecting 8&12.
- Road leading W ends at location directly S.
- Its integer factors less than itself add to itself.
- Locations directly N add to 10.
- Neighboring locations add to 18.
- Roads leading N/S/E/W end at locations directly N/S/E/W.
- Odd number tied for 2nd-most neighbors.
- N-most location with no locations directly S.
- Exactly 3 locations directly E.
- Exactly 3 neighbors accessible by roads leading N/S/W.
- Locations directly N and directly W multiply to 11.
- Even number tied for 2nd-most neighbors.
- Largest prime numbered location (only factors are 1 and itself).
- Squared number  $x^2$  that neighbors a cubed number  $y^3$ .
- Neighboring locations multiply to 15.
- Exactly 4 locations directly SW.

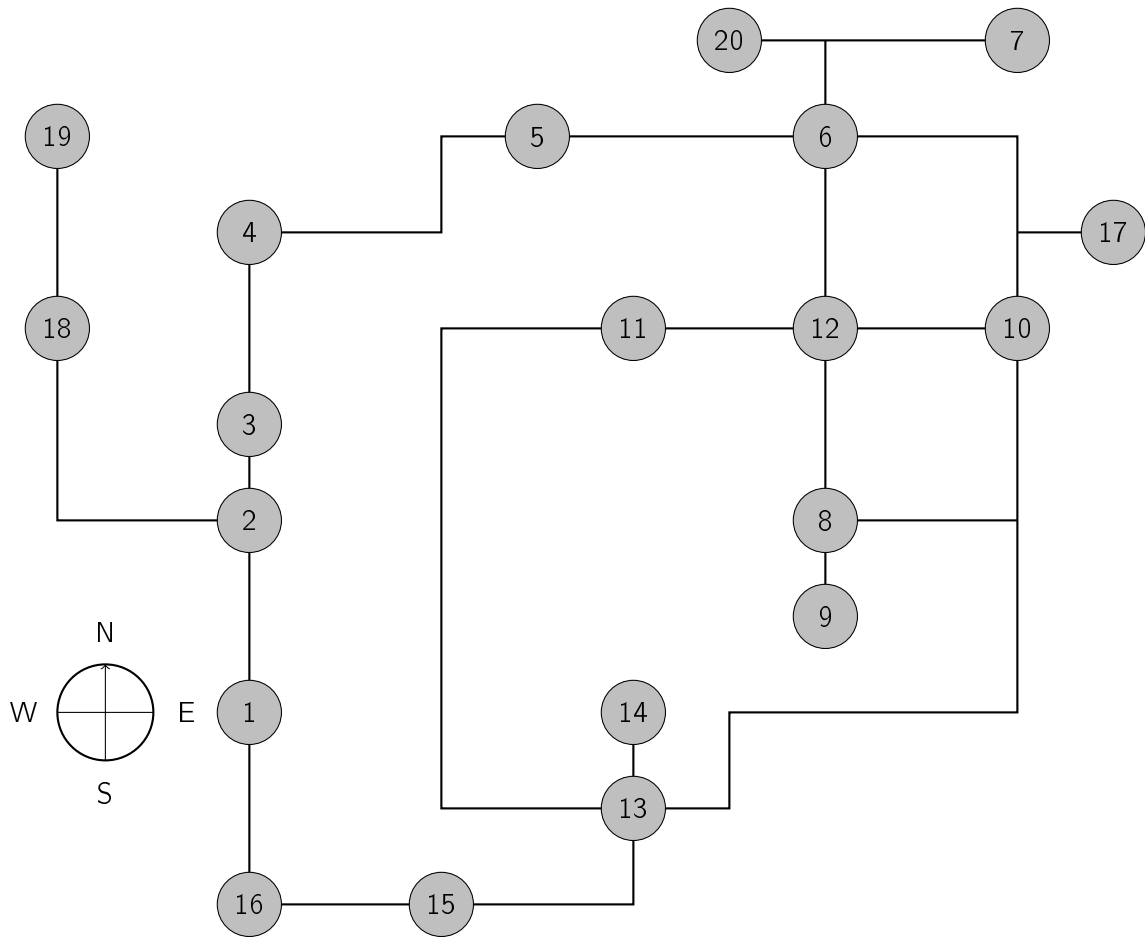

Can you deduce the **four remaining locations**? Solving this puzzle varies by campus, so **Game Control** will tell you what to what to do with this information. Good luck!

MaPP Challenge '18 - Gotta Solve 'Em All

# The Kantor Region

Road Map

## **Part III**

# **Main Puzzles**

## MaPP Challenge '18 - Gotta Solve 'Em All

# Go For It!

### Main Puzzle 1

While traveling down Road  $4.139\pi$ , you cross paths with a wizened Mobimon Trainer. After finally completing his **non-skippable seven-hour tutorial** on how to catch Mobímon, you try to slip away without him noticing. Alas, before you can make your excuses, he begins to tell you how Mobímon battles were fought **back in his day**.

Before Mobímon battles were limited to one-on-one matches, two trainers would send all their Mobimon into battle at once. Trainers would often practice battling by **alternatively placing black and white stones** on the intersections of lines on a grid, representing the positions of each trainer's Mobímon. The old man, not bothering to hide his frustration that you aren't showing any interest in this bit of history, insists on showing you the following example.

The senile old coot explains that a **group** of stones is formed when the stones are positioned directly adjacent horizontally or vertically on the board. A group of stones (or a single stone) will be defeated if they are **completely surrounded by a group of opposite-colored stones** vertically and horizontally, as in the following example.

You haven't really been listening, but then the old man mentions that he might be able to tell you where to **find some interesting Plant-type Mobímon** if you can solve this **puzzle**. In each of the provided **Old-School Mobímon Battle Grids**, there is exactly **one position where a stone could be placed (white or black)** that defeats a group of opposite-colored stones. The solution to this puzzle is found by taking each boundary letter that matches the color and position of the correct stone for each grid; for example, the above example would yield the letter S. Solve it quickly before the old man can start another long-winded conversation!

MaPP Challenge '18 - Gotta Solve 'Em All

**Go For It!**

Old-School Mobímon Battle Grids

## MaPP Challenge '18 - Gotta Solve 'Em All

# When Push Comes to Shove

## Main Puzzle 2

While training your Mobimon on Road  $\sqrt{9^2 + 12^2}$ , you are approached by **Dockworker Dave**, who challenges you to a Mobimon battle! Of course you accept... turning him down would be **rude**, don't you think?

It's a close match, but you win! As Dave gives you your victory money, he tells you about a group of **Tattarat** Mobimon that infest the warehouse he works in. These obnoxious critters like to **rearrange the boxes** in his warehouse, so Dave cuts you a deal. He'll let you catch a Tattarat for your team, but only if you help him reorganize his boxes.

The boxes in the warehouse must be **stacked** so that each row of boxes is always pressed up against the **left wall** of the warehouse, and each row of boxes must have the **same or less boxes** than every lower row.

Other than that, it's up to you. For example, there are **seven** different ways to stack **five** boxes.

The dockworker notices your good work. "Hey, didya say you were aiming to become one of them Mobimon Champions? Maybe you're smart enough to solve this **puzzle** for me then." It seems that if you can count the following different combinations of stacked boxes, you'll be able to reveal a **two-word hidden message** by converting the numbers to appropriate letters (A=1, B=2, and so on).

### First word:

- The number of ways to stack 2 boxes plus the number of ways to stack 6 boxes.
- The number of ways to stack 12 boxes, if every row must contain an odd number.
- The number of ways to stack 8 boxes, if every row must contain less than eight.
- The number of ways to stack up to 5 boxes. (An empty room counts as one way...)
- The number of ways to stack 4 boxes.

### Second word:

- The number of ways to stack 8 boxes, if every row must contain less than seven.
- The number of ways to stack 13 boxes, if every row must have less boxes than the row below it.
- The number of ways to stack 42 boxes, if you can only use one row.
- The number of ways to stack 1 box plus the number of ways to stack 12 boxes, if every row must have a unique number of boxes.

## MaPP Challenge '18 - Gotta Solve 'Em All

# The Nickname Rater

### Main Puzzle 3

As your adventure continues, you find yourself in **Achromatopsia City**, located at the end of Road 20.7183—e and home of the famous Mobîmon **Nickname Rater**. She explains that while Trainers often like to give their Mobîmon cute nicknames, she's very particular about the rules for an **excellent** Mobîmon nickname. For clarity, you can assume that a **vowel** is any of the letters A/E/I/O/U, and a **consonant** is any other English letter.

- **Rule 0:** A is an excellent nickname.
- **Rule 1:** Adding a consonant to the end of an excellent nickname ending with a vowel creates a new excellent nickname.
- **Rule 2:** Doubling an excellent nickname creates a new excellent nickname.
- **Rule 3:** Replacing three consecutive vowels in an excellent nickname with a consonant creates a new excellent nickname.
- **Rule 4:** Removing two consecutive consonants from an excellent nickname creates a new excellent nickname.
- **Rule 5:** Exchanging the consonants in an excellent nickname with other consonants creates a new excellent nickname. Similarly, exchanging the vowels in an excellent nickname with other vowels creates a new excellent nickname.
- Nicknames that cannot be created using these rules are not excellent.

For example, A (Rule 0), AA (Rule 2), AAAA (Rule 2), SA (Rule 3), SAM (Rule 1), SAMSAM (Rule 2), SAAM (Rule 4), and NEAT (Rule 5) are all excellent nicknames.

The Nickname Rater, not one to shy away from a good **puzzle**, offers you the chance to rate the following Mobîmon nicknames yourself. You'll know when you've done it correctly, because if you **take the first letters of the excellent nicknames below** in order, you will spell a good **seven-letter word for a nickname** (even if it's not particularly **excellent** itself).

- |              |              |             |
|--------------|--------------|-------------|
| • MANKAY     | • EEVOL      | • AERODYCTL |
| • ULTRAMON   | • NOHTYP     | • PARACENT  |
| • OMASTARE   | • BLASTMOIST | • EARSEA    |
| • VOLTEON    | • ICHU       | • DRAGONAT  |
| • GENGASKHAN | • KADABARA   | • RAGMAR    |

# MaPP Challenge '18 - Gotta Solve 'Em All

## Endless Enigmas

### Main Puzzle 4

As you make your way down Road  $\frac{6.4984}{\sin(20^\circ)}$ , you find a group of **Doppl** Mobimon in a patch of tall grass. At first the size of the group is **finite**, so you can count them in the usual way.

- $0 =$  no Doppl
- $1 =$  
- $2 =$  
- $3 =$  
- $4 =$  

However, before you know it, the size of the group grows to be literally **infinite**! Your Mobidex (an electronic guide used by most Mobimon trainers) informs you that the lowercase Greek letter  $\omega$  ("omega") is used to represent the shortest possible chain of infinitely-many Doppl.

- $\omega =$  

As soon as they appeared, most of the Doppl **shrink** down to fill the available space. Now, there's still an  $\omega$ -length chain of Doppl, but they look a little more like this.

- $\omega =$  

Your Mobidex points out that while  $\omega$  is the first **infinite number**, but it's not the only one! You see, bizarre as it sounds, there's always room for another Doppl to join the party.

- $\omega + 1 =$  
- $\omega + 2 =$  
- $\omega + 3 =$  

Suddenly, it gets really weird as you notice more infinite-length families of Doppl in the surrounding area. Your Mobidex is able to count a few of these groups.

- $\omega + \omega = \omega \cdot 2 =$  
- $\omega + \omega + \omega + 5 = \omega \cdot 3 + 5 =$  
- $\omega + \omega + \omega + \dots = \omega \cdot \omega = \omega^2 =$  

Your Mobídex points out that the rules of **arithmetic** behave differently when the numbers involved aren't all finite. (You suddenly remember your math teacher pleading with you to not use  $\infty$  like it's a real number, and now realize why!)

When chains of Doppl are added together, a finite chain of Doppl will be absorbed into an infinite chain on its right, but not its left.

- $3 + 4 = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \text{Doppl}\text{Doppl}\text{Doppl}\text{Doppl}\text{Doppl} = 7$
- $7 + \omega = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \text{Doppl}\text{Doppl}\text{Doppl}\text{Doppl}\text{Doppl}\text{Doppl} = \text{Doppl}\omega = \omega$
- $(\omega \cdot 4 + 3) + (\omega \cdot 2 + 5) = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \omega \cdot 6 + 5$

The Mobídex informs you that Doppl chains can also be multiplied. When this occurs, each Doppl in the second factor splits into a copy of the Doppl chain given by the first factor.

- $3 \cdot 4 = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = 12$
- $(\omega + 1) \cdot 2 = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \omega \cdot 2 + 1$
- $2 \cdot (\omega + 1) = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \text{Doppl}\omega + 2 = \omega + 2$
- $(\omega + 1) \cdot \omega = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\}\{\text{Doppl}\} = \omega^2$

Somehow you're not too shocked when your Mobídex tells you that there's a **puzzle** associated with counting Doppl. It's said that a Doppl's favorite Mobimon attack is 24007042951, but you'll need to solve the following Doppl arithmetic problems to figure out what that means in English!

$$\begin{aligned}
 (\omega + 3) \cdot (\omega + 5) &= \omega^2 \cdot E + \omega \cdot G + S \\
 \omega + 1 + \omega + 3 + \omega + 5 + \omega + 7 &= \omega \cdot I + O \\
 3 \cdot \omega + \omega^2 \cdot 5 + 4 \cdot (\omega^2 + 2) &= \omega^2 \cdot L + \omega \cdot R + N \\
 2 \cdot (2 + \omega \cdot 3) + (\omega \cdot 3 + 2) \cdot 2 &= \omega \cdot A + M
 \end{aligned}$$

Solve each problem, and then use these solutions to assign the numbers 0 through 9 to the ten letters shown above. Use this assignment to decode 24007042951 and you will have solved the puzzle!

## **Part IV**

# **Bonus Puzzle**

## MaPP Challenge '18 - Gotta Solve 'Em All

# The Expedition Zone

### Bonus Puzzle

The **Expedition Zone**, found off the side of Road  $6 + i^2$ , is a great place to catch some rare Mobimon! You've been provided eleven **Mobi Nets** to set up in the Zone. There are a few rules to consider, however.

1. You may set up your nets in any order, but your first net must cover the **upper left corner** of the Zone.
2. All subsequent nets **must be connected at a corner** to a previous net, as in this example.

3. Nets **cannot connect along an edge** to other nets, as in this example.

You've been provided with an **Expedition Zone Map**. Each square on this map that contains a number represents a Mobimon with that much strength. **Maximize the sum of the numbers covered by your Nets**, and you'll prove you have what it takes to become a Mobimon Champion!

## Mobí Nets

Cut out these figures and tape them to the **Expedition Zone Map**, following the rules outlined in the **Bonus Puzzle**.

## **Part V**

# **Cryptic Puzzles**

## MaPP Challenge '18 - Gotta Solve 'Em All

# Civic Duty

### Cryptic Puzzle 1

You finally slip away from the rambling Tutorial Man, but just your luck! A pack of Mobímon are blocking the path through Road In(148.45).

- Dankgunk
- Burnie
- Glooble
- Electrumble
- Corporil
- Ayepey
- Hearit
- Forluxi

Luckily, the nearby Mobímon Center has **86 trainers** on staff, because they need **all of them** to tame these wild Mobímon.

- Glooble needs the fewest trainers.
- Corporil needs the most trainers.
- Electrumble and Hearit are the only pair that require the same number of tamers.
- The number of trainers needed by Dankgunk and Glooble differ by one.
- The number of trainers needed by Dankgunk and Electrumble differ by one, and add to nine.
- Ayepey, Burnie, Corporil, and Forluxi each need at least ten trainers.
- Ayepey needs a perfect square number of trainers.
- Ayepey, Burnie, and Forluxi each need an even number of trainers.
- Forluxi requires less trainers than Burnie.
- Burnie and Corporil's required trainer numbers share a prime factor.
- Corporil and Forluxi's required trainer numbers share a prime factor.
- But Corporil and Ayepey's required trainer numbers do not share a prime factor.

You start to offer your help, but are quickly rebuffed by the Mobímon Center's leader, a famous **Dojo Master!** "Hang on, young trainer! I'm afraid there's yet a certain **quality** you need to learn before you get yourself hurt." You're not sure what she means, but figure that the best way to find out is to start by calculating how many trainers each Mobímon requires.

## MaPP Challenge '18 - Gotta Solve 'Em All

# Cross Product

### Cryptic Puzzle 2

Impressed with your problem-solving ability, the dockworker suggests you head to the Mobimon Dojo at the end of Road tan( $87.7094^\circ$ ). There, the **Dojo Master** agrees to battle you, but only on one condition. He presents you a scroll with the following clues...

“Only a trainer that has one of these can possibly become HIPCONAM.”

I J C B R K Y W R O K  
L I L Q G C J T A Y H  
A D O A R Y I R N J D  
B O H U E E O M G X B  
I G O A E C N A T L P  
Z Q C Q P H T Z I G T  
Y A P O F E M A G Q T  
G M W T M G C A I Q K  
O D G G L Z B F H V S  
E A D N E U D X L A Q  
W K Z U A Y E F N J W

Lightning × Plant

Undead × Flame

Aqua × Ordinary

Flame × Magic

A voice belonging to your mentor echoes in your head... “The key to winning Mobimon battles is understanding how types match up.” You know that some Mobimon types are weak against some types, while super effective against others. But you’re not convinced that’s what this scroll is referring to. Can you unscramble the meaning of the Mobimon Master’s scroll?

## MaPP Challenge '18 - Gotta Solve 'Em All

# Blind Luck

### Cryptic Puzzle 3

The Nickname Rater suggests you continue your journey down Road 500%, where an elusive **Dojo Master** is known to battle up-and-coming Mobimon trainers. You arrive at the dojo, but it seems that a secret password is required to enter, and your only clue is the following image.

RED BLUE YELLOW GOLD SILVER CRYSTAL

You'd move the sun and moon to figure out that password and battle the Dojo Master! Calmly, you **shut your eyes** and begin to ponder the solution to this Mobimon mystery...

## MaPP Challenge '18 - Gotta Solve 'Em All

### Pin it Down

#### Cryptic Puzzle 4

After figuring out the mysteries of the Doppl Mobîmon, you realize that they are **trying to tell you something**. Could it be the location of a Mobîmon Dojo?! (Of course it is.)

Sure enough, at the end of Road  $\frac{19!}{18!}$ , you find the **Dojo**. Its **Master** doesn't hesitate; as soon as you enter her lair, she sends out two of the most ferocious Mobîmon you've faced yet!

She laughs arrogantly at your hesitation. "There's **something you must first become** before you can defeat Mobîmon like Nohtyp and Doppl!" Mesmerized, you look for a clue in the arena, anything that can reveal what you want, no, need to be...

## **Part VI**

# **Metapuzzle**

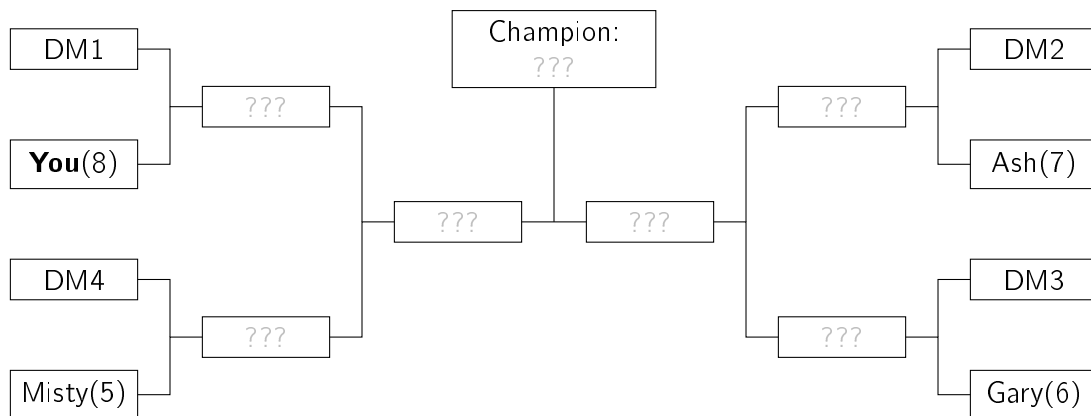

## MaPP Challenge '18 - Gotta Solve 'Em All

# Route to Victory

### Metapuzzle

You've finally reached the end of your journey, having been honored by the four **Dojo Masters** with the opportunity to compete with them and three other trainers in the **Mobímon Tournament**! You've each been ranked according to your previous battle experience; unfortunately, that means you'll have to work your way up from the bottom!

- Dojo Master 1 (Rank 1) will use \_\_\_\_\_.
- Dojo Master 2 (Rank 2) will use \_\_\_\_\_.
- Dojo Master 3 (Rank 3) will use \_\_\_\_\_.
- Dojo Master 4 (Rank 4) will use \_\_\_\_\_.
- Misty (Rank 5) will use Squidiny.
- Gary (Rank 6) will use Glowmage.
- Ash (Rank 7) will use Steinape.
- You (Rank 8) will use \_\_\_\_\_.
- 1st place Mobímon: \_\_\_\_\_
- 2nd place Mobímon: \_\_\_\_\_
- 3rd place Mobímon: \_\_\_\_\_
- 4th place Mobímon: \_\_\_\_\_
- 5th place Mobímon: \_\_\_\_\_
- 6th place Mobímon: \_\_\_\_\_
- 7th place Mobímon: \_\_\_\_\_
- 8th place Mobímon: \_\_\_\_\_

Your task is no simple one, so be sure to read over the **Mobímon Battling Overview** to learn the ins and outs of the tournament.

- You should be able to **figure out which Mobímon** each of the Dojo Masters will use in this tournament based upon your previous experiences with them and the provided **Mobímon List**.
- You'll also need to **choose a Mobímon for yourself**. Luckily, there's exactly one Mobímon on the provided list that can beat every trainer you'll face in the tournament!
- Finally, if you **rank the participating Mobímon** according to the tournament results, you might be able to identify an alternate title for the Mobímon Champion, solving today's final puzzle!

## MaPP Challenge '18 - Gotta Solve 'Em All

# Route to Victory

## Mobímon Battling Overview

The *PWR* of a Mobímon move is based on the Mobímon's *LV*, but modified by a couple rules.

Each Mobímon has one or two of these types: Ordinary, Flame, Aqua, Plant, Magic, Undead, and Lightning. In addition, each Mobímon move has one of those types as well. If the type of the move matches one of its user's types, then the *PWR* of that move is multiplied by 1.5. Otherwise the Mobímon type does not affect the *PWR* of the move at all.

Secondly, the type(s) of the opponent Mobímon also affect the move's *PWR*, according to the following chart. For each of the opponent's types, consider the cell found in the intersection of that column and the row given by the move type. If the cell isn't empty, multiply the move's *PWR* by that number.

		Mobímon Type(s)						
		O	F	A	P	M	U	L
Move Type	O					$\frac{1}{2}$	0	$\frac{1}{2}$
	F		$\frac{1}{2}$	$\frac{1}{2}$	2		2	
	A		2	$\frac{1}{2}$	$\frac{1}{2}$	2		
	P		$\frac{1}{2}$	2	$\frac{1}{2}$			2
	M	$\frac{1}{2}$	2					2
	U	0			2	2		
	L	$\frac{1}{2}$		2			2	

For example, a Flame-type move used against a Plant/Magic-type Mobímon is modified by a factor of 2, but it would be modified by  $\frac{1}{4}$  instead if used against a Flame/Aqua-type Mobímon. (If the user has the Flame type, then the total modifiers would be 3 and  $\frac{3}{8}$ , respectively.)

Each Mobímon knows two different moves, so it's up to the trainer to decide which move would have greater *PWR* against their opponent. The Mobímon that uses the move with greater *PWR* than their opponent wins the battle and moves on in the tournament, and the loser is knocked out.

During a tournament, each trainer must use the same Mobímon for all battles, and each Mobímon cannot be used by more than one trainer. At the conclusion of the tournament, the trainers and their Mobímon are ranked according to how many battles were won: 1st place for 3 wins, 2nd place for 2 wins, 3rd-4th place for 1 win, and 5th-8th place for no wins. The rankings each trainer entered the tournament with are used to sort 3rd-4th and 5th-8th places.

## MaPP Challenge '18 - Gotta Solve 'Em All

# Route to Victory

## Mobímon List

Name	Type(s)	LV	1st Move	2nd Move	Mobídex Description
Ariafire	Flame	50	Flame	Lightning	Works well with other firey Mobímon.
Burnezam	Flame/Magic	49	Flame	Magic	Known for its caution and level-headedness.
Dawnoduh	Ordinary/Undead	56	Ordinary	Flame	Your run-of-the-mill zombie.
Emaphant	Ordinary	52	Ordinary	Magic	Tramples over the competition.
Finfanta	Magic	54	Magic	Flame	Moody, it creates clouds of strife.
Glowmage	Magic/Lightning	55	Magic	Undead	A shining example of magical prowess.
Planktin	Aqua/Plant	51	Plant	Ordinary	Well, it grows on you at least.
Scorchar	Flame/Lightning	58	Flame	Undead	It can run a mile in under 38 seconds.
Steinape	Undead/Lightning	47	Lightning	Ordinary	It's alive with passion for battling.
Squidiny	Aqua	57	Aqua	Ordinary	A lot of fun to go surfing with.
Thundora	Lightning	53	Lightning	Plant	This extreme Mobímon pushes it to the limit.
Zomtreed	Plant/Undead	43	Undead	Magic	Incredibly profecient, like no one ever was.

## **Part VII**

# **Appendix**

# MaPP Challenge '18 - Gotta Solve 'Em All Solutions

## Opening Puzzle - The Kantor Region

The locations not ruled out are 3,7,8,15.

## Main Puzzle 1 - Go For It

The correct stones are laid as follows.

- White on TZ - T
- Black on UH - H
- White on EY - E
- White on FB - F
- Black on NO - O
- Black on JR - R
- White on EG - E
- Black on IS - S
- Black on FT - T

The solution is THEFOREST.

## Main Puzzle 2 - When Push Comes to Shove

- $M=13=2+11$  The number of ways you can stack either 2 or 6 boxes.
- $O=15$  The number of ways you can stack 12 boxes, if every row must contain an odd number.
- $U=21=22-1$  The number of ways you can stack 8 boxes, if every row must contain less than eight.
- $S=19=1+1+2+3+5+7$  The number of ways you can stack up to 5 boxes. (An empty room counts as one way...)
- $E=5$  The number of ways you can stack 4 boxes.
- $T=20=22-2$  The number of ways you can stack 8 boxes, if every row must contain less than seven.
- $R=18$  The number of ways you can stack 13 boxes, if every row must have less boxes than the row below it.
- $A=1$  The number of ways you can stack 42 boxes, if you can only use one row.
- $P=16=1+15$  The number of ways you can stack 1 or 12 boxes, if every row must have a unique number of boxes.

The solution is MOUSETRAP.

## Main Puzzle 3 - The Name Rater

Since vowels are always doubled or subtracted by 3 when creating excellent nicknames, and the basic excellent nicknames have exactly one vowel, it is impossible for an excellent nickname to have a multiple of 3 vowels in a word. Thus all the words that have 3 vowels are not excellent (and the others can be verified to be excellent).

- **MANKAY** 4As ->BA->B->BABBAB
- *ULTRAMON* (3 vowels)
- **OMASTARE** 16As ->ABABBABA
- *VOLTEON* (3 vowels)
- *GENGASKHAN* (3 vowels)
- *EEVOL* (3 vowels)
- **NOHTYP** 16As ->BABBBB
- *BLASTMOIST* (3 vowels)
- **ICHU** 8As ->ABBA
- **KADABARA** 4As ->BA->BABABABA
- *AERODYCTL* (3 vowels)
- *PARACENT* (3 vowels)
- **EARSEA** 16As ->AABBAABB->AABBAA
- *DRAGONAT* (3 vowels)
- **RAGMAR** 4As ->BA->BAB->BABBAB

The solution **MONIKER** is another word for nickname (but is not excellent as a nickname, because it has 3 vowels).

## Main Puzzle 4 - Endless Enigmas

$$\begin{aligned}(\omega + 3) \cdot (\omega + 5) &= \omega^2 \cdot E + \omega \cdot G + S = \omega^2 \cdot 1 + \omega \cdot 5 + 3 \\ \omega + 1 + \omega + 3 + \omega + 5 + \omega + 7 &= \omega \cdot I + O = \omega \cdot 4 + 7 \\ 3 \cdot \omega + \omega^2 \cdot 5 + 4 \cdot (\omega^2 + 2) &= \omega^2 \cdot L + \omega \cdot R + N = \omega^2 \cdot 6 + \omega \cdot 0 + 8 \\ 2 \cdot (2 + \omega \cdot 3) + (\omega \cdot 3 + 2) \cdot 2 &= \omega \cdot A + M = \omega \cdot 9 + 2\end{aligned}$$

Thus 24007042951 yields the solution **MIRRORIMAGE**.

## Cryptic Puzzle 1 - Civic Duty

This puzzle is solved by ordering the Mobímon alphabetically, then converting the required number of trainers for each using A=1,B=2, etc.

- Ayepey:  $P = 16$
- Burnie:  $R = 18$
- Corporil:  $U = 21$
- Dankgunk:  $D = 4$
- Electrumble:  $E = 5$
- Forluxi:  $N = 14$
- Glooble:  $C = 3$
- Hearit:  $E = 5$

The solution is **PRUDENCE**.

## Cryptic Puzzle 2 - Cross Product

“Only a trainer that has one of these can possibly become HIPCONAM.” HIPCONAM is an anagram of CHAMPION, hinting players to search for anagrams of the seven given words within the grid.

I	J	C	B	R	K	Y	W	R	O	K
L	I	L	Q	G	C	J	T	A	Y	H
A	D	O	A	R	Y	I	R	N	J	D
B	O	H	U	E	E	O	M	G	X	B
I	G	O	A	E	C	N	A	T	L	P
Z	Q	C	Q	P	H	T	Z	I	G	T
Y	A	P	O	F	E	M	A	G	Q	T
G	M	W	T	M	G	C	A	I	Q	K
O	D	G	G	L	Z	B	F	H	V	S
E	A	D	N	E	U	D	X	L	A	Q
W	K	Z	U	A	Y	E	F	N	J	W

Each “cross product” represents the letter where the two words cross in the grid, yielding the following.

Lightning × Plant = T      Undead × Flame = E      Aqua × Ordinary = A      Flame × Magic = M

The solution is TEAM.

## Cryptic Puzzle 3 - Blind Luck

The blind/sight clues suggest to find a way to criss-cross the given words in the grid using Braille. There is exactly one way to do this, involving various orientations for each word. (To get started, note that there is only one option for RED, and if you choose the wrong orientation then CRYSTAL cannot fit.)

The numbered regions 12345 yield the solution ULTRA in Braille.

# Cryptic Puzzle 4 - Pin It Down

Overlaying the mirror images of the monsters reveals a message using the Pig Pen cipher (where the open circles represent no dot, and the filled-in circles represent a dot).

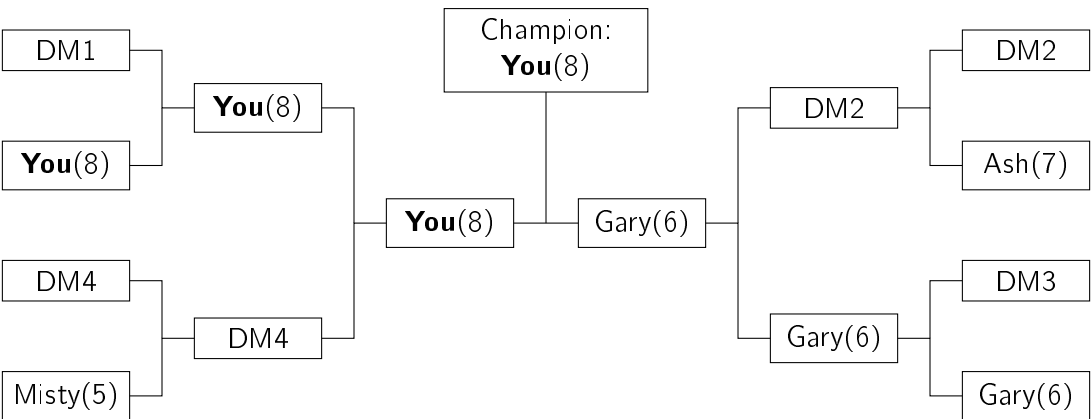

The solution is VERYBEST.

# Metapuzzle - Route to Victory

The four Dojo Master Mobímon are determined by comparing the Cryptic Puzzle solutions to the Mobídex descriptions.

- DM1: PRUDENCE ⇒ “Known for its caution and level-headedness.” ⇒ Burnezam
- DM2: TEAM ⇒ “Works well with other firey Mobímon.” ⇒ Ariafire
- DM3: ULTRA ⇒ “This extreme Mobímon pushes it to the limit.” ⇒ Thundora
- DM4: VERYBEST ⇒ “Incredibly profecient, like no one ever was.” ⇒ Zomtreed

The tournament may then be calculuated, assuming the player wins their battles. To do so, the player’s Mobímon must defeat Burnezam, Zomtreed, and Glowmage. It follows that the only possible choice to win the tournament is Emaphant. This results in the following rankings.

- |   |  |
|---|--|
| 1. Emaphant (You, originally ranked 8)  | 5. burnEzam (DM1, originally ranked 1)   |
| 2. gLowmage (Gary, originally ranked 6) | 6. thund0ra (DM3, originally ranked 3)   |
| 3. arIafire (DM2, originally ranked 2)  | 7. squidiNy (Misty, originally ranked 5) |
| 4. zomTreed (DM4, originally ranked 4)  | 8. steinapE (Ash, originally ranked 7)   |

The solution ELITEONE may be found by reading down the diagonal of the ranked Mobímon; that is, the first letter from first place, the second letter from second place, etc.

## Hidden Puzzle

Each of the Roads referenced in Main Puzzles 1-4, the Bonus Puzzle, and Cryptic Puzzles 1-4 approximate to an integer between 1 and 26.

- |                                |  |  |
|--------------------------------|--|--|
| • $4.139\pi \approx 13 = M$    | • $\frac{6.4984}{\sin(20^\circ)} \approx 19 = S$ | • $\tan(87.7094^\circ) \approx 25 = Y$ |
| • $\sqrt{9^2 + 12^2} = 15 = O$ | • $6 + i^2 = 5 = E$                              | • $500\% = 5 = E$                      |
| • $20.7183 - e \approx 18 = R$ | • $\ln(148.45) \approx 5 = E$                    | • $\frac{19!}{18!} = 19 = S$           |

MORSEEEYES is not the solution, but a hint on how to find it. In Main Puzzles 1-4, the Bonus Puzzle, and Cryptic Puzzles 1-4, occasionally the accented í in Mobímon is replaced with ì or î. Interpreting ì as “dit” and î as “dah”, these accented characters decode to the solution SECRETLAB (the location of the Legendary Mobímon).

## MaPP Challenge '18 - Gotta Solve 'Em All

# Knot True

## Teaser Puzzle

In MaPP Challenge '18 - Gotta Solve 'Em All, your team will travel to the world of **Mobímon**, where trainers befriend monsters and battle them against their opponents! (Now where have I heard that idea before?...) Of course, you'll probably find yourself encountering a wild **puzzle** or two, so let's see how you deal with this conundrum...

In a previous Mobímon tournament, six trainers competed and were ranked 1st through 6th: Ash, Brock, Cynthia, Drayden, Erika, and Flannery. You have been told the following statements about these results:

Ash and Flannery did not place 6th.

Erika placed exactly one rank higher than Ash.

Brock placed lower than Flannery.

Neither Brock nor Drayden placed 4th.

Drayden placed in the top three.

Either Cynthia or Drayden placed 3rd.

Unfortunately, there's no way all of those claims are **truthful**. By inspecting the **Trainer Badge** above each statement, you can uncover the **lies** by deciding if the cord depicted in its design would **tighten into a knot** if pulled taut; if the cord wouldn't knot when pulled, then the statement is true. By blacking out the incorrect results below, you'll reveal the answer to this riddle: *what is a mathematician's favorite kind of knot?*

	Ash	Brock	Cynthia	Drayden	Erika	Flannery
1st	O	Y	G	U	S	J
2nd	Q	C	M	V	A	X
3rd	F	P	U	N	I	E
4th	L	A	S	I	D	T
5th	K	N	B	Z	T	R
6th	H	R	W	E	L	M

MaPP Challenge '18 - Gotta Solve 'Em All

# Knot True

Teaser Puzzle Trainer Badges

Ash and Flannery did not place 6th.

Erika placed exactly one rank higher than Ash.

Brock placed lower than Flannery.

Neither Brock nor Drayden placed 4th.

Drayden placed in the top three.

Either Cynthia or Drayden placed 3rd.

	Ash	Brock	Cynthia	Drayden	Erika	Flannery
1st	O	Y	G	U	S	J
2nd	Q	C	M	V	A	X
3rd	F	P	U	N	I	E
4th	L	A	S	I	D	T
5th	K	N	B	Z	T	R
6th	H	R	W	E	L	M

## MaPP Challenge '18 - Gotta Solve 'Em All

# Knot True

## Teaser Puzzle Solution

The following cords wouldn't tighten into a knot, so their clues are **true**.

Ash and Flannery did not place 6th.

Erika placed exactly one rank higher than Ash.

Either Cynthia or Drayden placed 3rd.

The following cords would tighten into a knot, so their clues are **false**.

*Neither Brock nor Drayden placed 4th.*  
Corrected: Either Brock or Drayden placed 4th.

*Drayden placed in the top three.*  
Corrected: Drayden placed in the bottom three.

*Brock placed lower than Flannery.*  
Corrected: Brock placed higher than Flannery.

Logically, this results in the following grid.

	Ash	Brock	Cynthia	Drayden	Erika	Flannery
1st	O	Y	G	U	S	J
2nd	Q	C	M	V	A	X
3rd	F	P	U	N	I	E
4th	L	A	S	I	D	T
5th	K	N	B	Z	T	R
6th	H	R	W	E	L	M

A mathematician's favorite knot is a **SQUARE** knot! Oh... you say you've heard that one before? Well, our **puzzles** are better than our **jokes** at the **MaPP Challenge**, so we hope to see you there!

**MaPP Challenge '18 - Gotta Solve 'Em All**

## **ClueKeeper FAQs**

### **How do I install the ClueKeeper app?**

Visit (<http://cluekeeper.com>) or visit the App Store (on iOS) or Google Play (on Android). ClueKeeper supports iOS 9.0 or newer for iPhone and iPad, and Android 4.1 (Jelly Bean) or newer for Android phones and tablets as of 2017-09-21. A Google account is required for all app users, which will be used to create your ClueKeeper account.

### **How do I set up my team?**

The first device to enter the Hunt Code provided at orientation will be assigned as the “master” device, and will be the only device that can submit solutions or check in using GPS (so make sure it has sufficient battery or a charger).

The team name may be updated by using the menu on the hunt’s homepage.

Additional teammates may use the app in Read-Only mode. Using the menu on the hunt’s homepage, these teammates may be added by ClueKeeper username or email address. Teammates can use this to review solutions and points, but cannot submit solutions themselves. Adding teammates is completely optional.

### **Do I need internet on my phone to use ClueKeeper?**

The master device will require internet to download and start the hunt, as well as upload results at the end of the hunt. We recommend that the master device have relatively consistent connectivity to the internet so that teammates and Game Control will stay synced up with your team’s progress throughout the hunt.

### **What can I do if I have issues using ClueKeeper?**

Players should visit Game Control if they are having trouble with the ClueKeeper app. If Game Control cannot address the issue, then ClueKeeper may be contacted at [admin@cluekeeper.com](mailto:admin@cluekeeper.com) or 1-844-99-CLUES (1-844-992-5837).

**MaPP Challenge '18 - Gotta Solve 'Em All**

## MaPP Challenge '18 - Gotta Solve 'Em All Credits

Thanks for downloading the puzzle booklet for **MaPP Challenge '18 - Gotta Solve 'Em All** by Mathematical Puzzle Programs. These puzzle materials are provided as-is for use in the classroom (or anywhere else!) to help showcase the fun of mathematical problem-solving.

When the MaPP Challenge '18 - Gotta Solve 'Em All is over, we'd love your feedback on how to improve this booklet. You can contact us by email at [info@mappmath.org](mailto:info@mappmath.org). Or better yet, submit an issue or pull request at our GitHub page at <https://github.com/MaPPmath> directly.

More information on Mathematical Puzzle Programs may be found at our website <http://mappmath.org> and on our Twitter @MaPPmath. Happy mathematical puzzling!
